

EnergyAware

is a new world for backup power

Eaton enables your UPS to do more

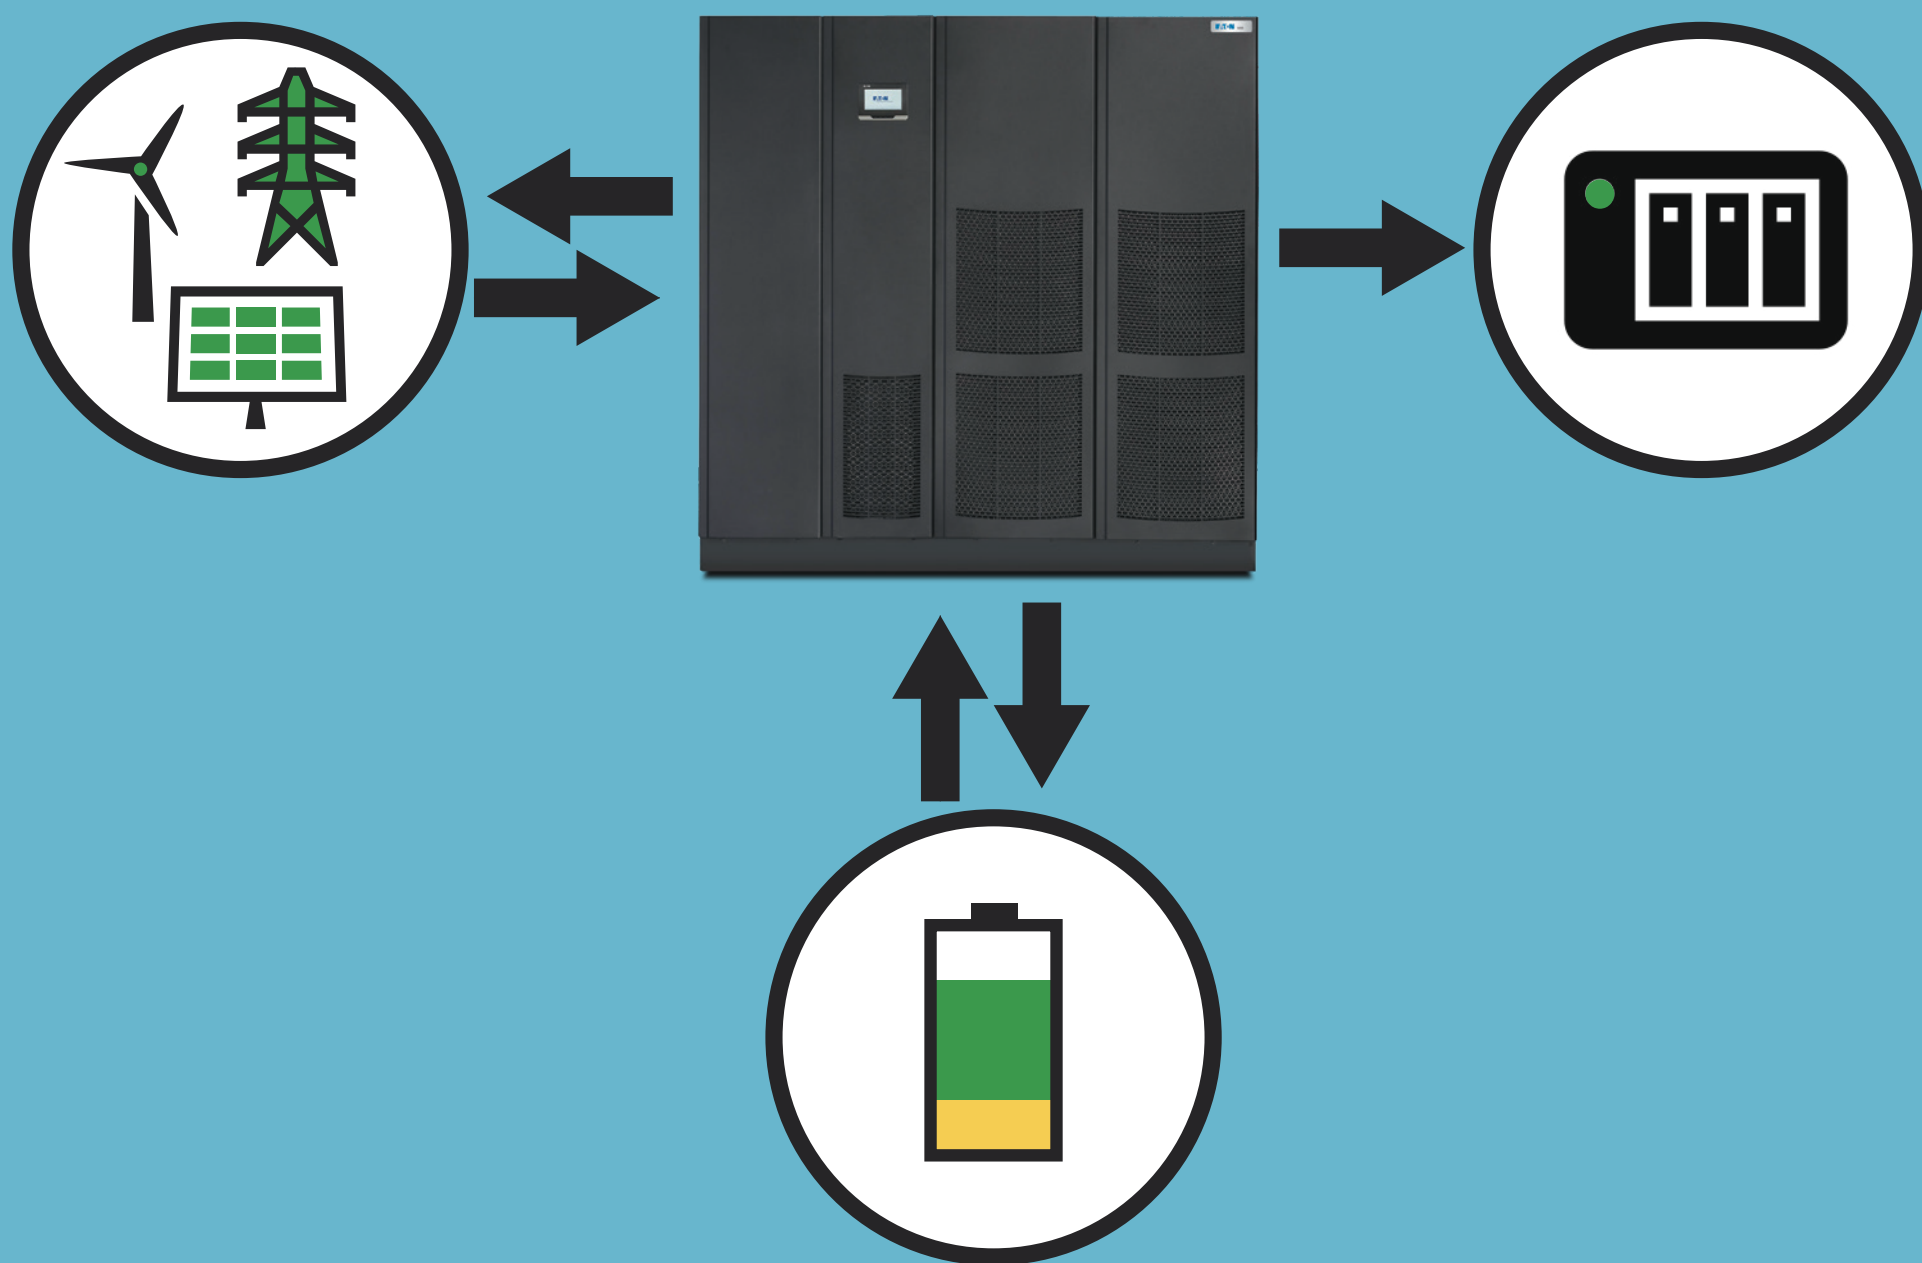

EnergyAware enables customers to support sustainable energy solutions, optimize the cost of powering buildings and create additional revenue streams from power protection assets.

UPS operators are in control of stored energy and can choose how much capacity to offer and when.

Do more than consume energy.

UPS operators can add value by helping energy providers balance power generation and consumption.

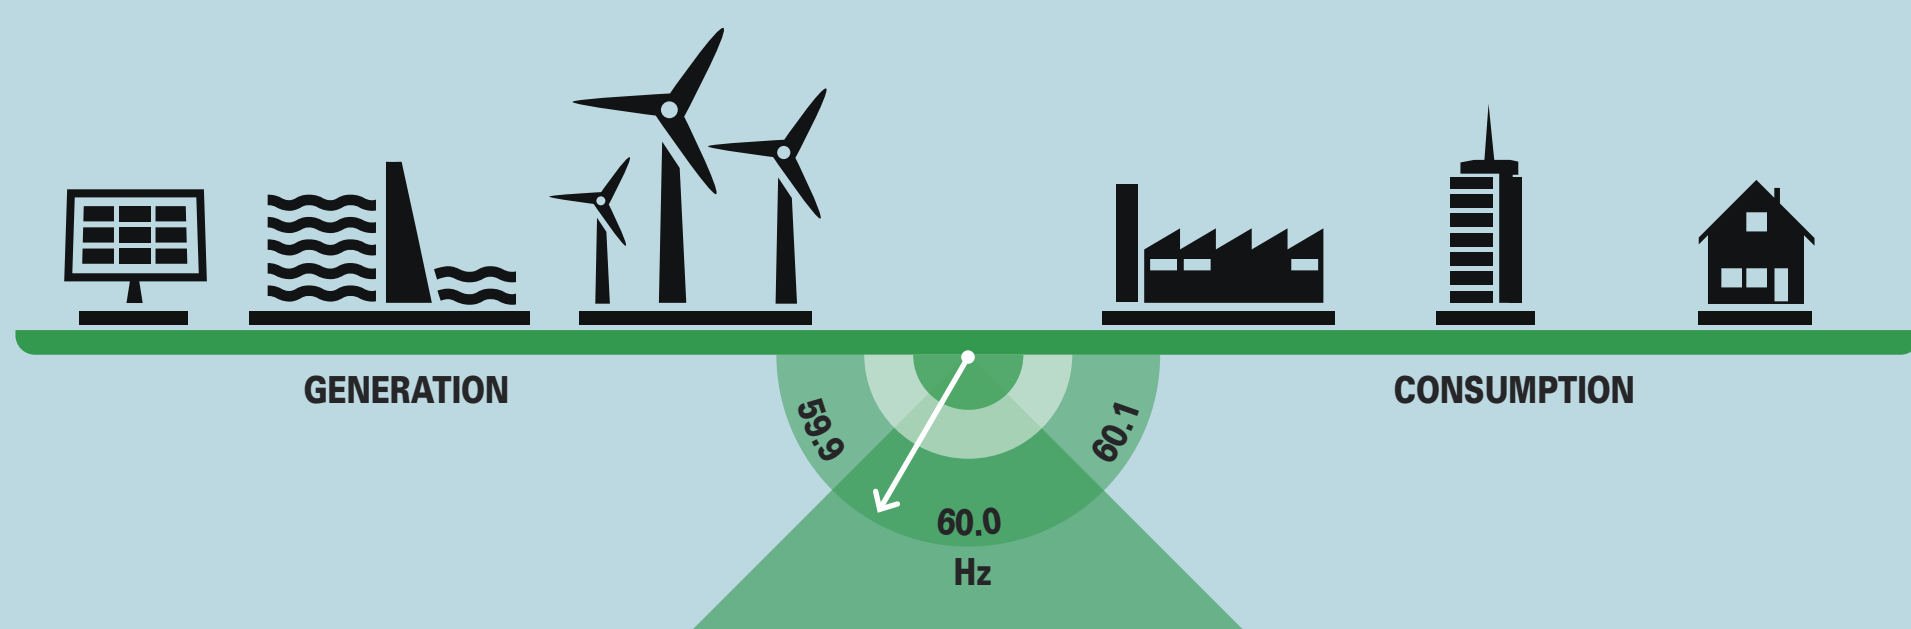

The UPS always maintains its primary role of ensuring continuity in the event of an outage. EnergyAware is a no-compromise solution that fully utilizes UPS battery and power capacity to maximize your investment.

Reduce demand charges and time-of-use energy costs.

Enabled by higher cycle rates and longer life of lithium-ion batteries.

Do more to balance power generation and consumption.

Demand charge management

User avoids demand charges by discharging at peak times.

Time-of-use optimization

Shifts energy consumption to avoid peak energy usage.

Demand response

Utility company requests reduction in power usage.

Frequency regulation

Charge or discharge battery on command to stabilize the grid.

Aggregation services

Manage multiple assets in a building or campus to work as a single entity.
