Additional Envir	onmental Information
Manufacturing	The reference product is assembled at an Eaton plant holding management system certifications according to ISO 14001 standards.
Distribution	Eaton is committed to minimizing weight and volume of product and its associated packaging material with focus to optimize transport efficiency.
Installation	During installation of the product only standard tools are needed, which do not require any additional energy source and no waste other than the obsolete product packaging is generated during this step.
Use	Though maintenance requirements of the UPS have been minimized, the current Product Specific Rule applicable to this kind of product requires the replacement of parts including— manufacturing, delivery to the site of use and waste collection & treatment of replaced components of: OC and AC capacitors of filtering (2 times) Fans (3 times) Power supply PCBs (2 times) Batteries (2 times)
End of life	The recyclability rate of the overall product is 66% if properly dismantled prior to further processing at a recycling facility. The rate is calculated based on "ECO'DEEE recyclability and recoverability calculation method" (version V1, 20 Sep. 2008 presented to the French Agency for Environment and Energy Management: ADEME).

Environmental Impacts

The calculation of the environmental impacts is the result of the Product's Life Cycle Analysis in accordance with ISO 14040/44, covering the entire lifecycle, i.e. "Cradle-to-Grave".

System modelling was carried out using the commercial LCA software EIME v5.9.4 with database version CODDE-2022-01.

Additional Information

Operating the Eaton 93PS UPS in Energy Saver System mode results in a significantly reduced environmental impact (up to 56 % reduction) compared to operation in Double Conversion Mode (as shown in radar chart to the right). This is mainly due to an improved energy efficiency in ESS of 98.5% (average) compared to an efficiency of 96.0% (average) in Double Conversion mode.
